### Notes

#### Antiviral Therapies

**Atazanavir**
- Safety and efficacy have been suggested in several small studies.

**Azithromycin**
- Hepatic elimination: use with caution in all degrees of hepatic impairment. Discontinue if signs of hepatic dysfunction.

**Chloroquine**
- Use with caution; monitor liver function tests and watch for toxicities.

**Favipiravir**
- Could consider extending treatment duration in COVID as per duration for ongoing trials. Dosing as per study US109.

**Hydroxychloroquine**
- Maximum dosage based on minimal data and risk of hepatotoxicity.

**Interferon beta**
- Caution if ALT >2.5x ULN. Dose reduction advised if ALT >5x ULN. Discontinue if jaundice or clinical symptoms of liver disease.

**Lopinavir/ritonavir**
- Use with caution and monitor for toxicities (see product label).

**Nitazoxanide**
- The pharmacokinetics of nitazoxanide in patients with compromised hepatic function have not been studied.

**Remdesivir**
- ALT 5x ULN exclusion criteria in clinical studies. Discontinuation: ALT >5x ULN or ALT elevation accompanied by signs or symptoms of liver inflammation or increasing conjugated bilirubin, alkaline phosphatase, or INR.

**Ribavirin**
- Discontinue if progressive and clinically significant ALT rises, despite dose reduction, or accompanied by increased bilirubin.

#### Immune Therapies

**Anakinra**
- The efficacy and safety in patients with AST/ALT ≥1.5x ULN have not been evaluated.

**Baricitinib**
- There was no clinically relevant effect on the pharmacokinetics of baricitinib in patients with mild or moderate hepatic impairment. The use of baricitinib has not been studied in patients with severe hepatic impairment.

**Dexamethasone**
- Particular care is required when considering the use of systemic corticosteroids in patients with liver failure and frequent patient monitoring is necessary. The elimination half-life is prolonged in severe liver disease.

**Ruxolitinib**
- Recommendations as for polycythaemia vera indication in product labels.

**Sarilumab**
- Initiating treatment is not recommended in patients with ALT or AST >1.5x ULN.

**Tocilizumab**
- European product label does not recommend treatment in patients with baseline ALT or AST >5x ULN. American product label does not recommend to initiate treatment in patients with elevated transaminases ALT or AST >1.5x ULN.
